Profile Summary

Computer Science graduate with hands-on experience in Machine Learning, Predictive Modeling, and Generative AI using Python. Built containerized ML applications with end-to-end deployment workflows and CI/CD pipelines. Experienced in developing LLM-powered and agentic AI solutions for real-world use cases, with strong fundamentals in Java, SQL, Data Structures and Algorithms, and clean engineering practices.

Technical Skills

- **Languages:** Python, SQL, Java, C++, Bash/Linux.
- **ML & AI:** Machine Learning, Deep Learning, LLMs, NLP, Agentic AI, XAI, Predictive Modeling.
- **Frameworks & Libraries:** TensorFlow, PyTorch, Scikit-Learn, Pandas, FastAPI, Streamlit.
- **DevOps & Deployment:** Docker, GitHub Actions, CI/CD Pipelines, Containerization, Model Deployment.
- **Core Fundamentals:** Data Structures & Algorithms, OOP, DBMS, Operating Systems.
- **Visualization & Tools:** Power BI, Matplotlib, Seaborn, Git.

Projects

Agentic AI Decision Support System (Brain Stroke Analysis)

Aug 2025

Python, Streamlit, TensorFlow, Groq, Llama 3.3 70B Versatile, Docker, GitHub Actions, CI/CD

[Code Link](#)

- Built a **CNN ensemble** using ResNet, AlexNet, and a custom CNN to classify brain stroke CT scans into ischemic and hemorrhagic cases.
- Integrated **Llama 3.3 70B Versatile** through Groq as an AI report-generation agent that converts ensemble outputs into clinician-friendly diagnostic reports in under 15 seconds.
- Implemented **Grad-CAM (XAI)** to generate CT-scan heatmaps, improving transparency behind the CNN ensemble's predictions.
- Containerized and deployed the application with **Docker** and implemented an end-to-end **CI/CD pipeline** using **GitHub Actions**.

Autonomous Lunar Navigation Stack (Safety-Critical AI)

Dec 2025

Python, PyTorch (SRResNet, U-Net), FastAPI, React.js, Three.js, Docker, GitHub Actions, CI/CD, A* Algo

[Code Link](#)

- Engineered a hybrid AI pipeline integrating SRResNet for low-visibility enhancement and **U-Net** for risk segmentation, achieving 92% accuracy in GPS-denied zones.
- Developed a **Real-Time Command Dashboard** using **React.js** and **Three.js** served by **FastAPI**, rendering live 3D terrain maps and telemetry.
- Implemented a deterministic **Physics-Based A*** planner using **Sobel gradient filters** to calculate slope costs and mathematically block unsafe trajectories.
- Containerized and deployed the full-stack system with **Docker** and configured **CI/CD automation** through **GitHub Actions**.

Publications

Cricket Score Prediction Using Machine Learning

Published in IEEE ASSIC 2025

- Co-authored a research paper comparing regression-based ML models including Random Forest, XGBoost, KNN Regressor, Decision Tree, Linear Regression, and SVR for cricket score prediction.
- Focused on model evaluation and validation using performance metrics such as RMSE to compare prediction accuracy across models.
- Applied feature engineering on match-specific factors such as overs, wickets, run rate, venue, and team/player context to improve predictive reliability.
- [IEEE Paper Link](#) | [Code Link](#)

Education

B.Tech in CSE

Sep 2022 – Jun 2026

Kalinga Institute of Industrial Technology (KIIT), Bhubaneswar

CGPA: 8.53

Class 12 (CBSE)

Kendriya Vidyalaya No.1 AFS Agra

2022

90.8%

Class 10 (CBSE)

Kendriya Vidyalaya No.1 AFS Agra

2020

94.2%
